

# Tech Associate Meet 03

---

20 March 2021 / 8:00 PM / Google Meet

## MEET AGENDA

1. Multiple magnetic GitHub features (issues, pull requests, project, kanban board, milestone, discussion space, markdown profile) were exhibited, extending the components instructed in meet 1.
2. It is required for us to apply for the **GitHub Student Developer Pack** to get introduced to some premium features for free. The premium highlights comprise several domains of Computer Science, Information Technology and Software Engineering in particular.
3. Tech associates have to work on a Dev Tool (selected from Dev Pack) based on their preference, and then a properly documented construction is required outlining the overview, knowledge base and user experience. 15-20 days can be a comprehensive timeline to sketch the documented infrastructure of a distinct feature.
4. Team collaboration was a discussion topic of the meet - 3 where we are supposed to work on projects aligning our versatile skill sets to develop those plans comprising a proper team combination.
5. It necessitates for the tech associates to conduct a session according to their expertise and preferred arena. Initially, the sessions would be conducted within the club fraternity, and session agendas must be illustrated on a PowerPoint slide.
6. Some engineered projects were exhibited to us, and we require to come up with some ideations modifying the projects, or any new ideation of an end to end project with an innovative approach would be utterly appreciated.
7. Manifested project ideas were:
  - Discord and Telegram bot
  - JUCOM official app

**Tech Associate**

**JU Computer Club**
